PROFESSIONAL SUMMARY

Generative AI Engineer with hands-on experience building AI-powered voice agents and intelligent automation platforms using Python, LLMs, FastAPI, Amazon Bedrock, and real-time AI technologies. Experienced in conversational AI, RAG, AI workflows, browser automation, CRM automation, and API development. Skilled in designing scalable AI solutions that automate real-world business processes.

SKILLS

Languages: Python

AI/ML: Machine Learning, Deep Learning, NLP, Transformers, Model Evaluation, Feature Engineering, Data analysis

Generative AI: LLMs, RAG, Lang Chain, Prompt Engineering, Tool Calling, Vector Databases, FineTuning

VoiceAI: STT, TTS, LiveKit, Real-time Streaming, Latency Optimization

Frameworks/Libraries: PyTorch, Tensor Flow, Scikit-learn, Pandas, NumPy, FastAPI, Flask, Streamlit

Tools: Git, GitHub, VSCode, Jupyter, Virtual Environments

PROFESSIONAL EXPERIENCE

➤ Generative AI Engineer | Holionix GmbH | Remote

Feb 2026– Aug 2026

- Built an AI-powered CRM using FastAPI, MongoDB, Playwright, and Amazon Bedrock to automate LinkedIn prospect discovery, qualification, outreach, and communication management.
- Developed modular REST APIs, workflow services, CRM modules, and dashboard analytics for campaign, lead, outreach, scheduling, and activity management.
- Built a multilingual AI voice agent using Python, LiveKit, LLMs, STT, and TTS for customer conversations.
- Developed stateful conversational workflows with LLM tool calling for authentication, information capture, business actions, scheduling, lead management, and automated call handling.
- Implemented RAG-based knowledge retrieval using vector search and Amazon S3 for context-aware responses.
- Integrated MongoDB and Amazon S3 for session management, transcripts, call logs, recordings, and real-time agent metrics.

➤ AI Intern | Infosys Spring board

- Built an Intelligent Speech Therapy Platform for pronunciation improvement
- Developed phoneme analysis, pronunciation scoring, and mispronunciation detection modules.
- Implemented personalized feedback and adaptive practice recommendations
- Supported progress tracking and backend optimization

PROJECTS

RAG-Based Document Intelligence System

- Built a Retrieval-Augmented Generation (RAG) system for question answering over PDF documents using Lang Chain.
- Implemented document ingestion, text chunking, embedding generation, and similarity-based retrieval.
- Used Hugging Face models, ChromaDB, and Groq-hosted LLaMA models for context-aware responses.

EDUCATION

B.Tech, Computer Science and Engineering

UCET, Mahatma Gandhi University, Nalgonda |2021-2025| **76%**
